

Global Environment, by Angela Khristin Brown

Abstract: Many humans value our environment. We must value our environment to protect it from depleting, because of uncertainty of how we live is very much different from our past values. To project or forecast the human consequences of global, we need to know the future state of the natural environment, the future of social and economic organization, the values held by the members of future social groups, the proximate effects of global change on those values, and the responses that humans will have made in anticipation of global change or in response to ongoing global change.

Introduction

It is very important for us to protect our environment from depleting. Globalism threat to our environment. We must sustain our way of living. The global ensures that the habitat of its species is cared for. We know the earth in how it has involved over the years. We must find ways that will insure climate control is permissive for every species are met on earth. We must preserve our forest in natural setting. Cutting down too many trees, hunting endangered, causing too much heat in the glaciers, can negatively affect the living habitat. We must find new cost effective and safe ways of using fuel.

The current way destroys the ozone. More parks and up keeping of lawns is good for the environment atmosphere. Energy safe products must be managed to protect our environment in safe methods. This is our world to live in. Every nation should be given safe health care, clean water, a good education and nutritious food to sustain healthy lifestyle. We must care for our own action to help one another.

Main Results

It is the responsibility of the U.S. to create ways for a higher environmental global climate agreement as an example to the rest of the world. America is an example to the world when it comes to protecting our environment. Theas. Acts as a do torment to change. The role of the U.S. has been to find ways in using energy, find ways in using coal efficiency, finding ways to recycle products, controlling waste and consumption. The U.S. is an example when it comes to storing energy. Hoover was built to restore energy.

Factories sine the 1800's monitored ways to improve the use of coal admissions in the air as we created safer car emissions. Cars are biodegradable when made out of plastic instead of hard iron. Fans align California as a source to providing energy. Collections of cans, plastics are waste prevention. Since the 70's, there has been litter control prevention towards fines for littering neighborhoods. Animals like the eagle species create habitation from distinction where animals have the right to live. There should be a use of oil and coal control to protect the environment from depleting. There should be a better global climate agreement in the U.S. solely because American scare about the world. If we do not protect our world, we will cease to have one. If we are role models, others will follow knowing that it is an important issue that others see examples and they respond caringly as well.

Global protection is a rhetoric that needs to be addressed. Global warming is important when we see ice glaciers melt at rapid rates leaving penguins and bears to multiply with a lack of food. The weather can change the habitat we live in. The weather has an effect globally on crops. If the weather were to change climate, it would be impossible for the soil to graze properly that can lead to famine. Some land could become dry or towed. If there were acclimate in the world, it could affect the industry sell of animal products. People would have to adjust to their living habits, if there were a climate change. Something needs to be done.

Americans should be aware of unfair practices of human labor in China. Unsafe practices in factories are a well know practice represented in the Industrial of the late 1800's and early 1900's in America. It was an unpopular act to hire young children to work in factories that had bad influence, unhealthy and unstable work ethics. It is now

Illegal to hire children to work at an early age. The factories then were so evasive that people were dying or faced being harmed working in those factories. America should learn a lesson from its past on its own homeland that labor practices are unjust in China. The Chinese helped America build its railroads. America should be supportive in helping China solve its issues. China needs to create a union where their factories members can vote on how to apply safety standards as a work ethic. Americans look at the underground prostitution rings in America and unsafe importing slaves from China to work in our factories as unconstitutional. It should be the same way in China; unconstitutional practices.

Americans should not support factories that support China by not importing their products unless they change their ways. America does a lot of business in China. Unsafe practices should not be overlooked. America can mandate laws that prohibit unfair litigation that may future impede and support China unless they are willing to change. The Idea in Brief should companies needing a new CEO pick someone from inside or outside? Insiders know the firm and its people, but they're often blind tithe need for radical change. Well, we're looking for someone to create a bridge back to China for the Chinese diaspora.

The site should inform readers about contemporary China, including the arts, pop culture and the nation's rapid development. It should also help those growing up away from China learn about the roots of the culture, such as family life, mythology and religion. Content should primarily provide deep background and reference on Chinese and current events. Although the site is not primarily history site, articles on China's rich past will naturally be included.

America is a first world country that has all of the above that matters in sustaining a good bill of health. Other countries like Kenya and Ethiopia do not have access to the same conditions. Third world countries like India, China and Africa have people who are under nourished and poor that live in unsanitary environments. We need to govern

countries by provided aid to the less fortunate. Sure there are homeless that live on the streets of America that are living in better than the people in third world countries.

America plays a good role in protecting our environment from erosion. Helping third world countries by supplying food and health care are established to change the system. America throws away enough food that could feed the needy of

Poor countries every day. God made this world for us to take care of it. I feel proposals for an irrigation system to lay pipes and wells to provide clean water should be an effort to provide clean water to Kenya and Ethiopia. I do not know why it is taking so long to cure the deceased water.

One thing they say about blacks is that they will never learn how to govern themselves because there is always someone against it. Africa needs to curtail agovernmentthat would mandate healthier living conditions by laying out a plan to do it'll over Africa there should be an irrigation system to provide clean water. Sanctions should be made where healthier living conditions are important where they all find a way to work together to have this done. Africans in America are an example of what Africa can become. Leaders should be led by example to help not only themselves but to govern each country in Africa proper and growth.

Africans need to educate their people on how to create an economic system where they can build Africa. By securing health care wean secure a nation. There is no excuse that there is a place where clean water is not available. Africans in America at one time did not have the resources to survive but we overcame. Africa can do the same to create a government that provides health care teach African. I dream that in Africa an immigration system where pollution is out lowed have a dream in Africa people are no longer living in shacks or on the street where housing developments are made to house the poor. I dream in Africa where people are being educated on their health in ways to sustain a community of poor so they do not have to live in poor resources. America has communities where the people have to go outside their area to find jobs and go to school and later come back to the community to help development and advancement. Africa can do the same to endorse programs that will help and not hurt them.

All Africans should be computer literate. India as a third World country is computer literate. The African economy would improve with the use and knowledge on computers. This is one way Africans can give back to their community. African citizens should protest for a better Africa. They can protest for better health. Education is the key to opening a closed mind.

War in Iraq, got into a war that had no meaning. There was no weapons of mass destruction andHusein was not a part of the threat. The real threat was with Arafat and Acadia. We chose to detour around the source of the problem causing many lives to be lost for no reason. We are dealing with people who will take any life at any cost for their religious faith. America had good intentions of helping to change a place to better the world. It was a plan no one wanted to have part of. The world viewed this war as an error. Now this country is a threat for a civil war. They need our help to provide the government we promised them. If we pull our troops out without a last strategy to deter the danger of civil war, it will be chaos. Peacemaking efforts with the conflicting tribes should come into consideration.

We should convince them that the government we promised will help their nation rather than have them destroy it and suffer the burden of a collapsed state of living. We must work with the people instead of inflicting our ideas of living so they can form the government they so badly need. Drugs, believe the curtail of submissive drugs anywhere should become illegal. Drug trafficking involves negative criminal activity where ever it is. Drugs involves gangs and Gang violence. The thought of allowing drugs filtrate near neighbors fowl represents in negative manner. For example; drug use in America has filtrated havoc and hatred wherever evil lurks. In America; drug trafficking controls gang territory where it becomes unamicable. The drug lords who control over people keeps threat to the controversy of poisoning the minds of the youth. Drugs are easy and it works.

It becomes easy to get drugs anywhere because it is universal and illegal. Drugs are so subversive have seen 3rd graders bring it to school to share with their friends. Weed is not a burden when used as a pain killer by common people instead of going to the doctor. Cocaine illegitimacy is in favor amongst American athletes. The media uses drugs in movies and sports as a distraction and a burden that everyone is aware of. Once used in the media it attracts drug use amongst junior high and high school students. Drugs are so easy that a family can earn a decent income of over \$30 grand in a half a year and with this choice real work does not matter. Where there are drugs, it attracts prostitution. Gangs will use girls to help promote the use of sell of drugs. The young girls sell their bodies to get drugs. Young girls will act as prostitutes at even an early age of 8 to attract the sale of drugs.

If Americans are aware that drugs are a problem, how will we control the problem anywhere else? Proper representation should be considered. Inlays the west side originally had no drug problem until the projects brought drugs into the neighborhoods. In the ghetto where you see them drive BMW or Jaguar cars and no one in the family works, you wonder why police become suspicious of how the poor black could drive this car. It is where you have leaders of the church like pastors, ministers who want men out of jails who commit these crimes and they promote the use of drugs in some of the churches. It is where innocent people are killed through drive byes to debate and ask

for truth and God's calling. How could we in this country support the use of drugs when the drugs are being poured into this country by whites or people who have the money to support drug trafficking by the police and politicians. Any government who defines drugs illegal we need to find ways to stop the sale of drugs. If drugs became legal nothing would change.

People's lives would still be affected negatively neutral. Do we want the same for Bolivia and Afghanistan? How do we control drug popularity and sells? Is therein answer by example? Police profiling should be allowed there with the same tough laws we have in America to clean some of the mess up. We need to be by example to promote ways of peace with its people. Africa, believes everyone in the world is entitled to clean air and water and a bill of good health in the pursuit of happiness. America is a first world country that has all of the above that matters in sustaining a good bill of health. Other countries like Kenya and Ethiopia do not have access to the same conditions. Third world countries like India, China and Africa have people who are under nourished and poor that live in unsanitary environments. We need to govern countries by provided aid to the less fortunate. Sure there are homeless that live on the streets of America that are living in better than the people in third world countries.

America plays a good role in protecting our environment. Helping third world countries by supplying food and health care are established to change the system. America throws away enough food that could feed the needy of poor countries every day. God made this world for us to take care of it. I feel proposals for an irrigation system to lay pipes and wells to provide clean water should be an effort to provide clean water to Kenya and Ethiopia.

Discussion: I do not know why it is taking so long to cure the deceased water. One thing they say about blacks is that they will never learn how to govern themselves because there is always someone against it. America needs to curtail agovernmentthat would mandate healthier living conditions by laying out a plan to do it'll over America there should be an irrigation system to provide clean water. Sanctions should be made where healthier living conditions are important where they all find a way to work together to have this done. Americans are an example of what America can become. Leaders should be led by example to help not only themselves but to govern each country in America proper and growth. America need to educate their people on how to create an economic system where they can build America. By securing health care wean secure a nation. There is no excuse that there is a place where clean water is not available.

Conclusion: America at one time did not have the resources to survive but we overcame. Americans can do the same to create a government that provides health care teach and inform. I dream that in American an immigration system where pollution is out lowed have a dream in American people are no longer living in shacks or on the street where housing developments are made to house the poor. I dream in American where people are being educated on their health in ways to sustain a community of poor so they do not have to live in poor resources. America has communities where the people have to go outside their area to find jobs and go to school and later come back to the community to help development and advancement. American can do the same to endorse programs that will help and not hurt them. All American should be computer literate. India as a third world country is computer literate. The American economy would improve with the use and knowledge on computers. This is one way Africans can give back to their community.
